this volume is about the normal development of adulthood as well as its vicissitudes and the contributions of such development to psycho pathology the authors are psychoanalysts of great clinical skill and perceptiveness but while their focus is consistently a psychodynamic one their conceptualizations about adult developmental processes are applicable to virtually all kinds of therapy it is extraordinary how little attention has been paid to the effects of adult developmental experience on mental development obviously mental structures are not static after the profound experiences of childhood and adolescence nor are they merely a template upon which adult experiences are processed the authors clearly demonstrate that current adult experience always adds to and interacts with existing mental structure which is itself the result of all preceding development after a first section in which they examine life cycle ideas on development from antiquity to the present they present their own work as it relates to adult experience and adult development their hypotheses about the psychodynamic theory of adult development are particularly creative and an enormous contribution to the psychiatric literature and the clinical understanding

of patients consistent with their views that development in adulthood is an ongoing and dynamic process they elaborate their ideas that childhood development is focused primarily on the formation of psyche structure while adult development is concerned with the continued evolution of existing structure and its use

cyclical psychodynamics and the contextual self articulates in new ways the essential features and most recent extensions of paul wachtel's powerfully integrative theory of cyclical psychodynamics wachtel is widely regarded as the leading advocate for integrative thinking in personality theory and the theory and practice of psychotherapy he is a contributor to cutting edge thought in the realm of relational psychoanalysis and to highlighting the ways in which the relational point of view provides especially fertile ground for integrating psychoanalytic insights with the ideas and methods of other theoretical and therapeutic orientations in this book wachtel extends his integration of psychoanalytic cognitive behavioral systemic and experiential viewpoints to examine closely the nature of the inner world of subjectivity its relation to the transactional world of daily life experiences and the impact on both the larger social and cultural forces that both shape and are shaped by individual experience here he discusses in a uniquely comprehensive fashion the subtleties of the clinical interaction the findings of systematic research and the role of social economic and historical forces in our lives the chapters in this book help to transcend the tunnel vision that can lead therapists of different orientations to ignore the important discoveries and innovations from competing approaches explicating the pervasive role of vicious circles and self fulfilling prophecies in our lives cyclical psychodynamics and the contextual self shows how deeply intertwined the subjective the intersubjective and the cultural realms are and points to new pathways to therapeutic and social change both a theoretical tour de force and an immensely practical guide to clinical practice this book will be essential reading for psychoanalysts psychotherapists and students of human behavior of all backgrounds and theoretical orientations
